

Amendments to the Claims:

The following listing of claims will replace all prior versions and listings of claims in this application.

Listing of Claims:

1-78. (Canceled)

79. (Currently Amended) A portable mobile entertainment and information apparatus of handheld size and weight comprising:

a cellphone adapted for wirelessly connecting to remotely located telephones;

means for recording audio data received from a microphone to a memory;

means for reproducing the audio data from the memory to any one or a combination of a built-in speaker, a remote wired earphone, a computer, and a television;

at least one jack ~~operably~~ operatively connected to the memory and adapted to be connected with any one or a combination of: ~~the~~ a remote wired microphone, the remote wired earphone, the computer, ~~or~~ and the television; and

a sensor for detecting any one or a combination of a sound, motion, and images;

wherein upon the sensor detecting any one or a combination of the sound, motion, and images, the microphone is activated to capture audio data within a range of the cellphone.

80. (Previously Presented) The apparatus of claim 79, wherein the cellphone is further adapted for selectively and wirelessly connecting to the Internet and to remotely located telephones.

81. (Currently Amended) The apparatus of claim 79, wherein the sensor is adapted to cause the cellphone to dial a preselected number upon detecting any one or a combination of the sound, motion, and images.

82. (Previously Presented) The apparatus of claim 80 further comprising a speaker adapted for use as a speakerphone.

83. (Previously Presented) The apparatus of claim 79, wherein the memory comprises a replaceable memory card having at least one engagement feature.

84. (Previously Presented) The apparatus of claim 83 further comprising a socket for receiving the replaceable memory card, the socket comprising an engagement element and a spring, wherein the engagement element mates with the engagement feature of the replaceable memory card and secures the replaceable memory card in the socket and wherein the spring urges the removal of the replaceable memory card from the socket upon releasing the engagement element from the engagement feature.

85. (Previously Presented) The apparatus of claim 84 wherein the socket and replaceable memory card are provided with matching non-symmetrical shapes, grooves, ridges, or a combination thereof, to facilitate the correct positioning of the replaceable memory card in the socket.

86. (Previously Presented) The apparatus of claim 83, wherein the replaceable memory card contains prerecorded data.

87. (Previously Presented) The apparatus of claim 86, wherein the prerecorded data comprises any one or more selected from the group consisting of: real-time sounds, music, still images, moving images, textual data, GPS location information, and combined sounds and moving images.

88. (Previously Presented) The apparatus of claim 79 further comprising any one or more of: a camera, a video recorder, and a GPS for receiving location information.

89. (Previously Presented) The apparatus of claim 88 further comprising a display for displaying any one or more of: still images, moving images, combined sounds and images, and GPS location information.

90. (Previously Presented) The apparatus of claim 88, wherein the apparatus comprises any one or a combination of a camera and a video camera having a switch means for capturing any one or a combination of sounds, images and combined sounds and images.

91. (Previously Presented) The apparatus of claim 79 further comprising a radio, wherein sounds and music from the radio is transmitted to at least one of the remote wired earphone or the built-in speaker.

92. (Previously Presented) The apparatus of claim 79 further comprising means for muting and interrupting the reproducing of the recorded audio data from the memory.

93. (Previously Presented) The apparatus of claim 79 further comprising an electronic stethoscope connectable to the jack, means for recording data received from the stethoscope to the memory, and means for wirelessly transmitting the data from the

electronic stethoscope to the Internet or to a remotely located telephone, wherein the electronic stethoscope includes at least one microphone.

94. (Previously Presented) The apparatus of claim 79 further comprising means for downloading or transmitting data, including wired or wireless transmission, to at least an external device.

95. (Previously Presented) The apparatus of claim 79, wherein the cellphone is a satellite telephone adapted to connect wirelessly to the Internet and to remotely located telephones.

96. (Previously Presented) The apparatus of claim 79, wherein the sensor is further adapted to detect any one or more of: low ambient light, light, acceleration, deceleration, smoke, and poisonous gas.

97. (Previously Presented) The apparatus of claim 80, wherein the apparatus further comprises means for uploading data from the memory and to the Internet or the external device and means for downloading data from the Internet or the external device to the memory.

98. (Previously Presented) The apparatus of claim 79 further comprising a microprocessor, wherein the microphone is operatively connected to the microprocessor and the memory for recording real-time sounds or music.

99. (Previously Presented) The apparatus of claim 79 further comprising a camera, at least one switch for capturing any one or a combination of sounds, images, and combined sounds and images, and a remote activation means for the microphone or the camera.

100. (Currently Amended) A portable mobile entertainment and information apparatus of handheld size and weight, the apparatus comprising:

a cellphone adapted for wirelessly connecting to remotely located telephones;

a camera adapted to capture images;

a microphone adapted to capture real-time sounds;

a memory adapted to record the captured sounds, images, and combined sounds and images;

first and second jacks, wherein the first jack is adapted to operably operatively connect the memory to an external device and to transfer the recorded sounds, images, or combined sounds and images between the memory and the external device, and wherein the second jack is adapted to connect to a remote wired microphone earphone;

wherein the recorded sound, images, or combined sound and images are reproduced from the memory through at least one of a display, a speaker, the remote wired microphone earphone, a television, and a computer; and

a sensor for detecting any one or a combination of a sound, motion, and images;

wherein upon the sensor detecting any one or a combination of the sound, motion, and images, either one or both of the microphone is activated to capture real-time sounds or the camera is activated to capture real-time images within a range of the cellphone.

101. (Previously Presented) The apparatus of claim 100, wherein the cellphone is adapted for selectively and wirelessly connecting to the Internet and for communicating with remotely located telephones.

102. (Previously Presented) The apparatus of claim 101 further comprising a speaker adapted for use as a speakerphone.

103. (Previously Presented) The apparatus of claim 100, wherein the memory comprises a replaceable memory card having at least one engagement feature.

104. (Previously Presented) The apparatus of claim 103 further comprising a socket for receiving the replaceable memory card, the socket comprising an engagement element and a spring, wherein the engagement element mates with the engagement feature of the replaceable memory card and secures the replaceable memory card in the socket and wherein the spring urges the removal of the replaceable memory card from the socket upon releasing the engagement element from the engagement feature.

105. (Previously Presented) The apparatus of claim 104 wherein the socket and replaceable memory card are provided with matching non-symmetrical shapes, grooves, ridges, or a combination thereof, to facilitate the correct positioning of the replaceable memory card in the socket.

106. (Previously Presented) The apparatus of claim 103, wherein the replaceable memory card contains prerecorded data.

107. (Previously Presented) The apparatus of claim 106, wherein the prerecorded data comprises any one or more selected from the group consisting of:

real-time sounds, music, still images, moving images, textual data, GPS location information, and combined sounds and moving images.

108. (Previously Presented) The apparatus of claim 100 further comprising a display and any one or more of a video recorder or a GPS for receiving location information.

109. (Previously Presented) The apparatus of claim 108, wherein the display reproduces any one or more of still images, moving images, combined sounds and moving images, or GPS location information.

110. (Currently Amended) The apparatus of claim 100 further comprising an audio recorder ~~operably~~ operatively connected to the microphone and the first and second jacks.

111. (Previously Presented) The apparatus of claim 100 further comprising a radio, means for interrupting wherein the sounds and music from the radio is transmitted to at least one of the remote wired earphone, and the speaker; and means for interrupting the playing of sounds, music or combined sounds and images from the memory or the Internet when receiving a telephone call.

112. (Previously Presented) The apparatus of claim 100 further comprising means for muting and interrupting reproducing of the recorded sound and music from the memory.

113. (Previously Presented) The apparatus of claim 100 further comprising an electronic stethoscope connectable to the first or second jacks, means for recording data received from the stethoscope to the memory, and means for wirelessly transmitting the data from the electronic stethoscope to the Internet or to a remotely

located telephone, wherein the electronic stethoscope includes at least one microphone.

114. (Previously Presented) The apparatus of claim 101 further comprising means for downloading or transmitting data, including wired or wireless transmission, to a second external device.

115. (Previously Presented) The apparatus of claim 100 further comprising a satellite telephone adapted to connect wirelessly to the Internet or to remotely located telephones.

116. (Previously Presented) The apparatus of claim 100, wherein the sensor is further adapted to detect any one or more of: low ambient light, light, acceleration, deceleration, smoke, and poisonous gas.

117. (Previously Presented) The apparatus of claim 101, wherein the apparatus comprises at least one means for uploading data to and downloading data from the Internet or the external device.

118. (Previously Presented) The apparatus of claim 100 further comprising a microprocessor, wherein the microphone is operatively connected to the microprocessor and the memory for recording real-time sounds or music.

119. (Previously Presented) The apparatus of claim 100 further comprising a remote activation means for the microphone or the camera.

120. (Currently Amended) A portable handheld mobile entertainment, information and communication apparatus comprising:

an earphone;

a cellphone including one or more of a microphone, a camera and a GPS unit capable of generating data, the cellphone adapted for wirelessly connecting with a communication network and including a preselected address for transmitting the generated data;

~~a memory comprising a built-in memory and a replaceable memory card having an engagement feature;~~

~~a socket comprising an engagement element and a spring, the socket adapted for receiving the replaceable memory card;~~

~~wherein the engagement element of the socket mates with the engagement feature of the replaceable memory card and secures the replaceable memory card in the socket and wherein the spring facilitates the removal of the replaceable memory card from the socket upon releasing the engagement element from the engagement feature;~~

wherein the cellphone is adapted means for recording generated data to and reproducing from the memory images, sounds and combined images and sounds and adapted for transmitting generated data to the preselected address when activated by preselected external stimuli received by the cellphone

~~a microprocessor;~~

~~a power source; and~~

~~a sound control.~~

121. (Currently Amended) The apparatus of claim 120 further comprising a ~~cellphone adapted for selectively and wirelessly connecting to the~~ communication

network being one of the Internet, a cellular network or a satellite network and for communicating with remotely located telephones.

122. (Currently Amended) The apparatus of claim 121 ~~further comprising a speaker adapted for use as a speakerphone,~~ the cellphone further including a mode with no ring tone for receiving a call and being responsive to a command to transmit the generated data to the preselected address.

123. (Canceled)

124. (Canceled)

125. (Canceled)

126. (Canceled)

127. (Currently Amended) The apparatus of claim ~~126 further comprising 120,~~ the cellphone further including a display for displaying at least one of still images, moving images, combined sounds and moving images, or GPS location information.

128. (Canceled)

129. (Canceled)

130. (Canceled)

131. (Currently Amended) The apparatus of claim 120 further comprising a jack, an electronic stethoscope connectable to the jack, means for recording data received from the stethoscope to the memory, and means for wirelessly transmitting the data from the electronic stethoscope to ~~the Internet or to a remotely located telephone~~ the communication network, wherein the electronic stethoscope includes at least one microphone.

132. (Canceled)

133. (Canceled)

134. (Currently Amended) The apparatus of claim 120 further comprising the cellphone at least one sensor adapted for detecting any one or more external stimuli selected from the group consisting of: low ambient light, motion, sound, light, image, acceleration, deceleration, smoke, and poisonous gas.

135. (Canceled)

136. (Currently Amended) The apparatus of claim 120, ~~further comprising a microphone operatively connected to the microprocessor and the memory for recording real time sounds or music~~ 137, the remote activation means wirelessly connecting with the cellphone through the communication network.

137. (Currently Amended) The apparatus of claim 120 ~~further comprising a microphone and a camera and~~ the cellphone further including a remote activation means for the microphone or the camera.

138. (Currently Amended) A portable handheld ~~electronic entertainment and information apparatus for storing, reproducing or transferring data, the apparatus comprising:~~

a cellphone adapted for wirelessly connecting with a communication network;

data receiving means adapted for capturing data, wherein the data receiving means is any one or more selected from the group consisting of: a camera, a video camera, a microphone, a wired remote microphone, an audio recorder, ~~a replaceable memory card socket having a spring and an internal engagement element,~~ a radio, a jack, and a GPS;

~~memory means, wherein the memory means is adapted to store data captured from the data receiving means;~~

wherein the cellphone comprises a mode with no ring tone for receiving a call and transmitting to the received call the data captured from the data receiving means and the data receiving means is activated by preselected external stimuli received by the cellphone to capture real-time sounds or real-time images within range of the cellphone;

~~data reproducing means adapted to reproduce or play the data stored in the memory means to any one or more selected from the group consisting of: a remote wired earphone, a wireless earphone, a display, a speaker, a computer, and a television;~~

~~at least one button operatively connected to the microprocessor and adapted to control the receiving, storing, reproducing or transferring of data; and~~

~~wherein the data comprises any one or more selected from the group consisting of: music with images, music without images, still images, real-time sounds, real-time moving images, combined sounds and moving images, and GPS location information.~~

139. (Canceled)

140. (Canceled)

141. (Canceled)

142. (Canceled)

143. (Canceled)

144. (Currently Amended) The apparatus of claim 141 138, wherein the memory means comprising a replaceable memory card contains prerecorded data.

145. (Canceled)

146. (Canceled)

147. (Canceled)

148. (Canceled)

149. (Previously Presented) The apparatus of claim 138 comprising a jack, an electronic stethoscope connectable to the jack, means for recording data received from the stethoscope to the memory means, and means for wirelessly transmitting the data from the electronic stethoscope to the Internet or to a remotely located telephone, wherein the electronic stethoscope includes at least one microphone.

150. (Canceled)

151. (Canceled)

152. (Currently Amended) The apparatus of claim 138 further comprising at least one sensor adapted to detecting any one or more selected from the group consisting of: low ambient light, a motion, a sound, a light, an image, an acceleration, a deceleration, a smoke, and a poisonous gas.

153. (Canceled)

154. (Canceled)

155. (Canceled)

156. (Currently Amended) A portable ~~handheld mobile entertainment,~~ information and communication apparatus comprising:

~~a cellphone including an earphone, a microprocessor, control buttons, a memory comprising a built-in memory and a replaceable memory card, a socket comprising a spring and an engagement element receiving the memory card, a display, a microphone, a GPS, a sensor for capturing external stimuli, and a camera, and a jack for transferring data between the memory and an external device selected from the group consisting of: a television and a computer;~~

~~wherein the earphone is a wired earphone or a wireless earphone for providing wired or wireless audio transmission of data from the memory;~~

~~wherein the microprocessor is operatively connected to the memory and is adapted to selectively control the capture of data, storage of the data to the memory, transfer of the data between the memory and the external device, and reproduction transmission of data from the memory;~~

~~wherein the control buttons are adapted for controlling at least one of music playing, skipping data, equalizing sounds, balancing sounds, and storing data;~~

~~wherein the memory card comprises an engagement feature for receiving the engagement element of the socket to secure the card in the socket;~~

~~wherein the spring in the socket is adapted for facilitating the removal of the memory card out of the socket upon release of the engagement element from the engagement feature of the memory card; and~~

~~wherein the data includes any one or more selected from the group consisting of: real time sounds, still images, moving images, music, music with~~

images, combined sounds and moving images, combined sounds with images and text, and GPS location information;

wherein the microprocessor is activated by preselected external stimuli received by the sensor to transmit the data by the cellphone.

157. (Currently Amended) An entertainment and/or information device comprising:

a replaceable memory card for storing and reproducing data, the replaceable memory card comprising at least one engagement feature, wherein the data comprises any one of or more of the following: sounds, music, real-time moving images, combined sounds and images simultaneously, combined text and sounds, still images, and GPS location information;

a socket for receiving the replaceable memory card, the socket comprising an engagement element and a spring disposed internally in the socket, wherein the engagement element of the socket mates with the engagement feature of the replaceable memory card internally of the socket and secures the replaceable memory card in the socket and wherein the spring facilitates the removal of the replaceable memory card from the socket upon releasing the engagement element from the engagement feature;

wherein the socket and the replaceable memory card are operatively connected to at least one of a microprocessor, a microphone, a remote microphone, an earphone, a display, a camera, a GPS or a jack for at least one of recording, reproducing or transferring data.

158. (Previously Presented) The device of claim 157 wherein the socket and the replacement memory card are asymmetrically shaped to match and to facilitate the correct positioning of the replaceable memory card in the socket.

159. (Previously Presented) A portable mobile entertainment and information apparatus of palm handheld size and weight, the apparatus comprising:

- a device adapted for wireless connection to the Internet and for uploading and downloading of data between the Internet and an internal memory;

- the data comprising at least one of music with or without images, moving images, sounds, combined sounds and moving images or GPS location information;

- a microprocessor adapted to control the storing, reproducing, uploading and downloading of data, wherein the microprocessor is operatively connected to a display;

- at least one button operatively connected to the microprocessor and adapted to control at least one of starting the playing, equalizing sounds, skipping data or balancing sounds, and of said reproducing data from the internal memory or the Internet;

- a remote earphone for reproducing data from the internal memory or the Internet;

- a jack provided for connecting the apparatus to a separate device for transferring data to and from the internal memory, wherein the microprocessor is operatively connected to the internal memory and the jack; and

- a sensor adapted for detecting any one or a combination of: low ambient light, motion, sounds, light, image, acceleration or deceleration.

160. (Previously Presented) The apparatus of claim 159, wherein the memory comprises a replaceable memory card having at least one engagement feature, and a socket for receiving the memory card, the socket having a spring and an engagement

element in the socket for securing memory card in the socket or removing the memory card from the socket.

161. (Previously Presented) The apparatus of claim 159, wherein the device comprises a cellphone adapted for selectively and wirelessly connecting to the Internet and for communicating with remotely located telephones.

162. (Previously Presented) The apparatus of claim 79, wherein the audio data is any one or more selected from the group consisting of real-time sounds and music.

163. (Previously Presented) The apparatus of claim 79, wherein the microphone is selected from the group consisting of: a built-in microphone and a remote-wired microphone.

164. (Previously Presented) The apparatus of claim 79, wherein the memory is a built-in memory.

165. (Previously Presented) The apparatus of claim 100, wherein the images are still images.

166. (Previously Presented) The apparatus of claim 100, wherein the images are real-time moving images.

167. (Previously Presented) The apparatus of claim 100, wherein the microphone is a built-in microphone.

168. (Previously Presented) The apparatus of claim 100, wherein the microphone is a remote-wired microphone.

169. (Previously Presented) The apparatus of claim 100, wherein the external device is selected from the group consisting of: a computer and a television.
